Virus protection

Spam protection

Customised to your company's domain name

Administrative control

TATA COMMUNICATIONS

Biz Mail

Key Features

- **Customized Email Name:** Get email addresses that are customized with your company domain name.
- **Space:** Get 2 GB space per user.
- **Web Based Email:** Experience rich, innovative user-interfaces that are specifically designed for business users.
- **Access anywhere / anyhow:** Access mails via your Web browser or your preferred POP email client (like Microsoft Outlook®).
- **Administrative control:** Add, remove and modify all your e-mail addresses via a Web-based interface.
- **Customized SMTP service:** Compose and send emails using any desktop-based email software such as Microsoft Outlook, Outlook Express, Eudora, Netscape Mail, etc.
- **POP3 & IMAP Access:** Download and view your email using your preferred email client (Microsoft Outlook, Outlook Express, Eudora, Netscape Mail, etc.). You do not necessarily have to use only the Web-based email client. IMAP provides various advantages, such as, freedom for users to download selective messages / attachments only, the ability to create and manipulate server-side folders, perform server-side searches on email messages, etc.
- **Unlimited Email Forwards:** Email Forwards are email addresses that are configured, such that, all incoming emails to them, are forwarded to other email address / addresses. The criteria for forwarding can be the corporate name, business department, additional nickname, misspellings or any other factor.
- **Auto-responders / Vacation Messages / Email Bots:** Enable / disable auto-responders for any email address. Each of your email users can add, delete and modify their own auto-responder from their Web-based email interface. Enabling the auto-responder would result in an automatic reply being sent out by the email system as soon as an email is received for that specific email address.
- **50 Mailing Lists:** Along with every hosting package, you get the ability to add 50 mailing lists with 500 members in each list. While adding a mailing list, you can decide to create it in the form of a newsletter, an announce list, a private discussion list or an open discussion list. You can choose to moderate messages and mailing list subscriptions. The 'Email Administrator Control Panel' allows you to view and edit your member lists, automatically block emails where the message size is greater than the size specified by you, add a specific message at the end of all posts, add / remove moderators, etc.

- **Advanced Email Threat Protection:**

Anti-Virus Protection for all your Email accounts: Round-the-clock, high-performance, comprehensive protection against the threat of email borne viruses and malicious code for all your email accounts. Stay protected with Anti-virus software that detects nearly 100% of the viruses and other malicious programs present in the Internet. Get the benefit of comprehensive database updates on virus patterns at frequent intervals and supports infallible identification.

Anti-Spam Protection: Block out unwanted spam at the server level. Make email communication more usable. The anti-spam solution blocks as much as 90% of all spam which is 100% guaranteed junk email, i.e., genuine mails would never get blocked.

Dictionary Harvest Attack Protection: Empower your business with email systems that automatically detects DHA attacks and nip them in the bud. They are designed to protect your accounts from extremely large attacks.

Mail Bomb Protection: Email Bombing involves sending of a large number of and / or excessively large-sized unwanted emails to a single email address, with the aim to prevent normal use of the mailbox. Protect your business with mailing systems that have built-in protection against such attacks.

Email Server Flooding Protection: Enable your business with state-of-the-art technology to detect email flooding attacks and launch counter-measures to protect your email servers.

What you need

All you need to have is an Internet connection and a computer. This may not necessarily be a server. The system doesn't require any software installation either.
