

# Online Backup

Secure your critical  
business data with an  
unlimited online back-up solution

In today's fast paced business environment, data is critical and needs to be protected from accidental deletion and hardware failures at all times. Backup options such as disks, flash memory and hard drives are manual and susceptible to various threats and risks, such as viruses, theft, corruption and damage. The only viable solution is an online data repository that is secure, scalable and easy to operate. Discover the advantage of Tata Communications' Online Backup that offers unlimited backup space, automatic uploads, ease of use, high security and location-independent access and sharing.

# Key Features

- **Unlimited Capacity** - Now you do not need to think about how much data you have or how much space you require. Our solution offers you the opportunity to backup unlimited business data.
- **Automatic Updates**- Checks for the latest version of the client automatically in the background. If a newer version is available, it is automatically downloaded and installed.
- **Make sharing Easy and Secure.** Share files for discussion within your organization or with your partners.
- **Secure Encryption** - The files on your computer are first encrypted using 3DES encryption. Next, they are uploaded to PC Online Backup servers, using a connection with 128-bit Secure Socket Layer (SSL) encryption. Your files are encrypted and unreadable, when they leave your computer and the data is perfectly secure.
- **Option of Selective Backup** - You have the option to select only important files for backup.
- **Incremental Backup** - After the first backup, it backs up documents that are new or changed, thus saving time.
- **No more worries on Hardware Failure (Easy Restoration)** - Restore your data to a suitable PC on hardware failures. Hence preventing loss of critical data.
- **Reporting** - Receive e-mail alerts that are based on the frequency set by you.
- **Easy management of Backed-up Files** - Online Backup has a secure Web interface to monitor your data anywhere, anytime without any additional investments.

## What you need (Minimum hardware requirements)

- Operating system: MAC or Microsoft XP/Vista
- Processor: 1 GHz or faster
- Free space on the local hard-drive: 50 MB.
- RAM: 256 MB or more.
- Internet connection: Broadband
