

PC Security

An all-in-one,
24x7 security solution
for your business

Build a more secure workplace, today!

Modern Internet threats are growing more complex and frequent, targeting all types of organizations. What every Small and Medium Business needs is a security solution that is easy to install, quick to detect threats and report on PC health.

PC Security is a complete package consisting of the client software and a management portal. The client software is available for laptops and desktops, and incorporates Antivirus, Antispyware, Antirootkit, Personal Firewall, Antispam and Antiphishing features under a single user interface. The online management portal can be accessed anywhere and at anytime, thus ensuring total control.

Get the advantage of Tata Communications' PC Security solution that is fast, safe and simple.

Get the PC Security Advantage

Enjoy the advantage of an all in one solution designed specially for SMBs

- **Automatic security updates for all types of threats** - Constant automatic updates on both client software and virus signatures that ensure the PC is **always up-to-date** on threat security.
- **An easy and effective management tool** - Access the online management tool anywhere, anytime to be in complete control. The management portal allows the customer to view the total security situation on all PCs, choose the most suitable security profiles and manage subscriptions. **This tool does not require any additional investments.**
- **Save Bandwidth**- The neighbour casting feature ensures that there is **minimal bandwidth consumption**, after the update of the first logged in PC on your network. Once a PC on your network has been updated, all other PCs are informed of the update (once they come online automatically).
- **Supports multiple users**- The license can be mapped to **multiple PCs** keeping in mind the number of PCs in your organization.
- **Comes with DeepGuard/ NHIPS** (networked host-based intrusion prevention system) This technology harnesses the power of 'in-the-cloud' computing, that enables global protection for all end user computers **within 60 seconds** from the initial confirmation of a new threat.

Key Features

- **Real-Time Automatic Protection** - Stops Viruses, Worms, Spyware and Trojans from attacking via e-mail, Web or removable media like USB-sticks.
- **Browsing protection** - Website rating, safe browsing and blocking of suspicious websites.
- **PC Security Shield DeepGuard** - Protects against unknown threats through a host-based intrusion prevention system (HIPS) including network queries (in-the-cloud).
- **PC Security Shield BlackLight** - Scans for Rootkits at the deepest level of the computer.
- **E-mail Scanning** - Scans POP3, SMTP and IMAP4 traffic for viruses.
- **Web Scanning** - Scans HTTP traffic for viruses before the data is forwarded into the web browser.
- **Spyware Protection** - Stops adware and spyware by using the real-time scanner.
- **Protection against Unknown Threats** - Blocks unknown threats in real-time using system changes, browser hijacking and code injections.
- **Firewall with Intrusion Prevention** - Detects and blocks hackers and new breeds of worms.
- **Automatic Selection of Firewall Profiles** - Automatically adapts security levels - such as office or mobile, based on network location.
- **Central Management** - PC Security Shield can be remotely installed, configured and monitored from one central location with PC Security Shield Policy Manager. The client configuration can be locked for always-on protection.

What you need (Minimum hardware requirements)

- **Supported Platforms:** Windows 7 (all editions) Windows Vista (64-bit, 32-bit) Windows XP Home, Windows XP Pro, Windows XP Media Center
- **Processor:** Capable of running Windows 7 or Windows Vista
- **Memory requirements:** 512 MB (1 GB recommended)
- **Disk Space:** Maximum 600 MB during installation
- **Browser:** Minimum Internet Explorer 6.0
- **CD-ROM and High speed Internet connection**

* The system must fulfill Windows 7 / Windows Vista minimum requirements as specified by Microsoft
